LD by the Numbers: Estimates of the Prevalence of Learning Disabilities in Canada

Report Overview

1. Introduction

This report has been created as a reference document containing estimates of the number of people with learning disabilities in Canada, its provinces and territories. Using information publically available from Statistics Canada and employing an incidence level for learning disabilities of 1 in 10, this report summarizes, in tabular format:

- Estimates of the number of people who have learning disabilities; and
- Projections of the number of people with learning disabilities for the years 2010, 2016, 2021, 2026 and 2031 using both a high and low growth scenario for Canada.

The humble intent of the author is that this document will serve as a valued tool for individuals who inform or develop policy, and professionals supporting or planning services for people with learning disabilities.

2. Methodology and Limitations

a. Estimates of the Population of People Living with Learning Disabilities

Estimates of the population of people living with learning disabilities were derived by calculating 10% of the reported population of Canada, its provinces and territories for 2009 (at July 1, 2009) as presented in Table 051-0001, last modified in on November 30th, 2009. Data were accessed on the Statistics Canada website on March 8, 2010.

An incidence level for learning disabilities of 1 in 10 people is widely accepted. This prevalence level is cited by the American based organization, The National Institute of Health (NIH). Because of its preeminence as an authority on health related issues, for the purposes of this report, the NIH figure has been used the authoritative source.

b. Projections of People with Learning Disabilities

The Statistics Canada website contains population projections for 2006 to 2031 using six different sets of assumptions about birth rates, immigration, death rates, etc. Scenario 1 yields the lowest estimates of population by the year 2031 and was labeled, for the purposes of this report as the “Low growth scenario.” Scenario 6

yields the highest estimates of population by the year 2031 and was labeled as the “High growth scenario.” Using an incidence level of 10%, both high growth and low growth projections of people with learning disabilities are summarized by 5 year age intervals for 2010, 2016, 2021, 2026, and 2031. In addition, these data are summarized to reflect major age groups of interest to people planning and providing services to individuals with learning disabilities.

c. Limitations and Cautions

The original source data and all tables presented in this report are displayed in 1000’s. To gain the actual estimate, all numbers must be multiplied by 1000.

In order to generate the population and projection estimates, 10% of the original source data (reported in 1000’s) was calculated. As a result, there will be some level of rounding errors in tables in this report, particularly for those provinces and territories with lower populations. However, this should not affect the overall interpretation of this report and the data presented.

People using this report and its data should note that population figures and population projections are from two different data sets. The population projection tables present information for 2006 and onwards. However, only data for 2010, 2016 and later are presented in this report. For this reason, there may be minor inconsistencies between the population projections for 2010 and the actual population (as reported at July 1, 2009). This is to be expected.

d. Disclaimer

While all attempts have been made to ensure this report and the information presented in this report is accurate, the author accepts no responsibility for any inadvertent errors.

Readers noting errors or wishing clarification are invited to contact the author at Kathryn@LDExperience.ca.

3. Format and Conventions

As noted earlier, all population figures are presented in 1000’s.

Percentages are presented to one decimal point. From time to time, there is some rounding error in the figures.

Actual population figures for Canada, its provinces and territories are presented in Section 1.

For readers accessing this report in colour, the following conventions have been employed:

- All tables presenting population figures at July 1, 2009 have a black header row.
- All tables presenting population projections using the low growth scenario have a red header row and left hand column.
- All tables presenting population projections using the high growth scenario have a blue header row and left hand column.

Each table is designed to stand alone. References are provided for the source data.

The same numbering system for tables has been used for each province or territory. For example, Table 2-3 for Newfoundland and Labrador will refer to the same information as Table 10-3 for Alberta.

Section 1: Canada

**LD by the Numbers:
Estimates of the Prevalence of
Learning Disabilities in Canada**

Table 1-1: CANADA – Estimate of People with Learning Disabilities (2009)

	All ages	0 to 14	15 to 64	65 and older
(In thousands)				
Canada	3374.0	561.2	2344.1	468.7

British Columbia	445.5	68.6	311.3	65.6
Yukon	3.4	0.6	2.5	0.3
Northwest Territories	4.3	0.9	3.2	0.2
Nunavut	3.2	1.0	2.1	0.1

- (1) Numbers extracted from population data for Canada, its provinces and territories for 2009 (at July 1, 2009), Statistics Canada, CANSIM, Table 051-0001, last modified at 2009-11-30. Data accessed March 8, 2010.
- (2) The National Institute of Health cites the incidence level of learning disabilities among youth as being 8 to 10%. Source: <http://www.ninds.nih.gov/disorders/learningdisabilities/learningdisabilities.htm>. Last updated March 12, 2009. In this and subsequent tables, an incidence rate of 10% has been assumed for the population.

Table 1-2: CANADA – Estimate of People with Learning Disabilities 2009 - Percentage Breakdown by Major Age Category

	All ages	0 to 14	15 to 64	65 and older
Canada	100.0	16.6	69.5	13.9
Newfoundland & Labrador	100.0	14.9	70.3	14.8
Prince Edward Island	100.0	16.5	68.2	15.3
Nova Scotia	100.0	15.0	69.2	15.8
New Brunswick	100.0	15.3	69.2	15.5
Quebec	100.0	15.8	69.3	14.9
Ontario	100.0	16.9	69.4	13.7
Manitoba	100.0	18.9	67.3	13.8
Saskatchewan	100.0	19.0	66.3	14.7
Alberta	100.0	18.2	71.3	10.4
British Columbia	100.0	15.4	69.9	14.7
Yukon	100.0	17.2	74.5	8.0
Northwest Territories	100.0	21.7	73.0	5.3
Nunavut	100.0	32.0	64.9	3.1

- (1) Numbers extracted from population data for Canada, its provinces and territories for 2009 (at July 1, 2009), Statistics Canada, CANSIM, Table 051-0001, last modified at 2009-11-30. Data accessed March 8, 2010. See Table A-1.
- (2) The percentage breakdown by major age category of individuals living with learning disabilities will be identical to percentage breakdown by major age category of all people. For example, if 13.9% of people in Canada are 65 years of age and over, then 13.9% of people with learning disabilities are 65 years of age or older.
- (3) The National Institute of Health cites the incidence level of learning disabilities among youth as being 8 to 10%. Source: <http://www.ninds.nih.gov/disorders/learningdisabilities/learningdisabilities.htm>. Last updated March 12, 2009.

Table 1-3: CANADA– Estimated Population of People with Learning Disabilities, 2010-2031 using Low Growth Scenario

	2010	2016	2021	2026	2031
	(In thousands)				
Aged 0–4	161.7	155.9	153.7	153.1	148.6
Aged 5–9	177.4	167.2	162.7	160.7	160.2
Aged 10–14	194.8	181.5	173.2	168.9	167.1
